FEATURES & BENEFITS

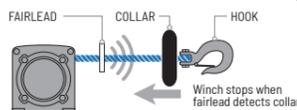

ALL POLARIS ENGINEERED WINCHES COME WITH:

- ✓ INTEGRATED WIRING, MOUNT, PREASSEMBLED
- ✓ HOOK WITH STRAP
- ✓ CUT STEEL GEARS & SEALED DRIVETRAIN
- ✓ SEALED PERMANENT MAGNET MOTOR

Retrieve cable 5x as fast as standard mode on other Polaris winches. Get back to riding or complete your task quicker.

1. Set winch dial to N (Neutral) to manually pull the rope out and secure the hook to your anchor point
2. Set winch dial to L (Low) for maximum pulling power while winching your load
3. Set winch dial to H (High) for retrieving the rope 5x faster with Rapid Rope Recovery

Auto Stop technology protects and extends the life of your winch by automatically stopping the winch at the end of pull to prevent over-spooling. While plowing, it prevents the plow frame from bending by stopping the winch once the plow has been lifted.

With its lightweight, yet extremely strong, design and superior flexibility, this 15.2 m long synthetic rope is easy to handle and can stand up to any tough job.

This convenient remote operates your Polaris winch wirelessly from within 15.2 m of the vehicle. Operate your winch safely outside your vehicle while on the job site or trails.

TAKE COMMAND OF CLEARING SNOW AND MAKE QUICK WORK OF EVEN THE HEAVIEST JOBS.

INSTALLATION

30 seconds: drive up, clip in, lock down, and go — the integrated Polaris Engineered Glacier Plow System simplifies plowing.

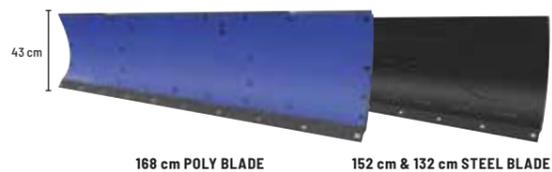

ROBUST FRAME

A plow system is only as strong as its frame, and Polaris Engineered plow frames have a wide frame to withstand the rigors of heavy plowing.

DURABLE BLADES

Available in strong stamped steel or corrosion-resistant poly materials, Polaris Engineered plow blades cover a large surface area for quick snow removal.

CONVENIENCE

Lift and angle adjustments can be made from the driver's seat.

MAINTENANCE & GARAGE

FACTORY APPROVED. Every Polaris vehicle has been engineered and manufactured to deliver performance. Keep it that way by using the same lubricants, cleaners and service parts our factory-trained technicians use.

FOR THE LIFE OF YOUR RIDE

PUSH THE LIMITS WITHOUT SACRIFICING STRENGTH, LONGEVITY AND DURABILITY.
Polaris parts are engineered specifically for your machine, to ensure you get the most out of each ride.

MAINTENANCE TIP

BREAK-IN PERIOD

The break-in period for your new Sportsman is the first 25 hours of operation, or the time it takes to use the first two tanks of fuel. No single action on your part is as important as a proper break-in period. Careful treatment of a new engine will result in more efficient performance and longer life for the engine.

NOTICE: Excessive heat build-up during the first three hours of operation will damage close-fitted engine parts. Do not operate at full throttle or high speeds for extended periods during the first three hours of use.

BATTERY

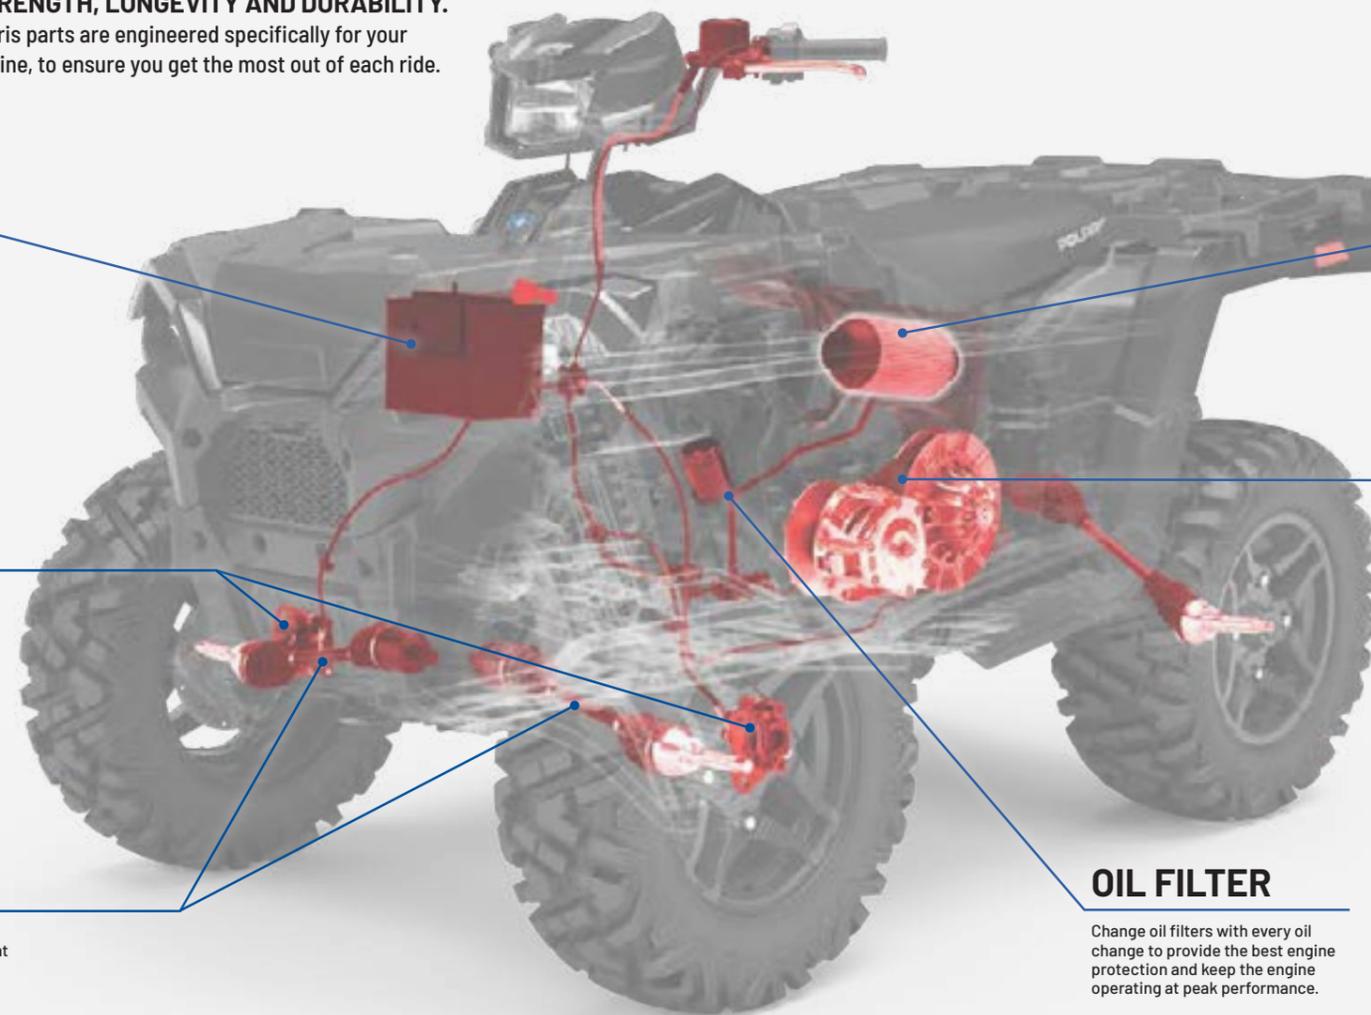

To ensure a battery maintains its level of charge when unused for extended periods of time or during freezing weather, the battery should be connected to a battery charger. Be sure to check for corrosion from the terminals to the ends of the cables.

BRAKE PADS

Brake pads should be checked for wear and oil or grease (petroleum products) contamination. Brake discs should be checked for cracks, excessive corrosion or warping.

HALF SHAFTS

Check for tears and punctures in the boot, which can lead to CV joint wear that can contribute to axle failure.

AIR FILTER

A clogged air filter can restrict air flow to the engine which can lead to reduced engine performance and shortened engine life.

DRIVE BELT

Polaris Engineered belts deliver unmatched performance for your off-road vehicle. Developed and tested on all our engines for all environments and conditions. Check your belt for delamination, hour glassing and glazing.

OUR INVESTMENT

- 64,000+ km of field testing
- Thousands of dyno hours
- 18+ months of development (13,000+ design hours) per belt
- 1,500+ vehicle validation hours
- Collaboration with powertrain and clutch engineers

YOUR ADVANTAGE

- No clutch recalibration
- Less wear and tear due to heat
- Ensure maximum vehicle performance
- More time riding, less time wrenching
- Produced in collaboration with powertrain and clutch engineers to ensure a perfect fit, maximum performance and ultimate durability

BREAK-IN PERIOD

- Use lower gear (if available) while varying speeds and avoid wide open throttle for 8-16 km
- If no low gear is available, vary at moderate speeds while avoiding wide open throttle for 80 km

OIL FILTER

Change oil filters with every oil change to provide the best engine protection and keep the engine operating at peak performance.

PS-4 EXTREME SYNTHETIC 0W-50

- Our best extreme high and low temp formula, excellent for high temperatures and racing, even at temps of 54°C, plus easier cold starting even below -42°C
- Expect the best in wear protection thanks to premium PAO and ester base stocks combined with a balance of moly and ZDDP additives
- Polaris exclusive clean engine additive system reduces deposits and carbon build-up for peak performance and power

THE BEST PROTECTION, MAXIMUM PERFORMANCE

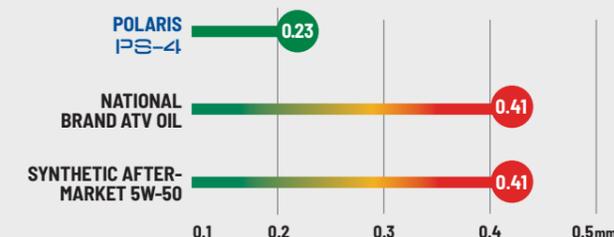

- Powersports grade full synthetics provide long lasting engine protection
- At least 40% improved wear protection compared to all aftermarket oils tested (see engine wear test chart)
- Polaris exclusive clean additive system
- At least 50% less deposits than all aftermarket oils tested (see deposit test chart)
- Cleaner engine with less deposits means consistent maximum power and performance

WIDEST VISCOSITY FOR ULTIMATE PROTECTION

ENGINE WEAR TEST

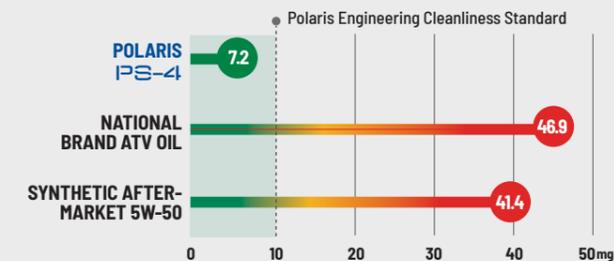

LOWER NUMBER = LESS ENGINE COMPONENT WEAR
LESS WEAR ON PARTS MEANS LONGER ENGINE LIFE

ASTM D4172. In 3rd party testing against 9 competitive products Polaris had 40% or better wear protection compared to all of the tested products. Numbers represent mm of wear scarring measured. Test measures wear at contact points, wear scar is measured for its length and width (in units of mm). Lower wear numbers mean better wear protection and friction reduction.

DEPOSIT TEST

LOWER DEPOSITS = MAXIMUM POWER

ASTM D6335. In 3rd party testing against 9 competitive products Polaris PS-4 had less than half the deposits compared to the next closest product. No other tested products met Polaris Engineering standards for deposit cleanliness. Test measures mass of deposits in mg in high temp, high stress test cycles. Higher deposits will impact engine power and performance.
